Watering Schedule for weeks three and four.

Light watering **once** a day.

	1	2	3	4	5	6	7	8	9	10	11	12	13	14

To get the best out of your new lawn

- Give your newly seeded lawn a light watering three times a day.
- After week two, water once each day in the morning only.
- When the grass blades are 10cm tall you can mow your lawn.
- Only remove the top 3cm for the first few cuttings.
- Do not cut the lawn below 5cm tall during summer to avoid burn-off.
- Fertiliser has been spread with the hydroseeding mix so no further fertiliser should be needed until your lawn is about five weeks old.

Refertilise the lawn if you notice any discoloration. This may be required as early as 4 weeks after germination, depending on the quality of the soil.
